2019 MAYO CLINIC VASCULAR SYMPOSIUM

AMELIA ISLAND, FLORIDA MARCH 28–30, 2019

COURSE DESCRIPTION

The purpose of this symposium is to not only provide an overview of the current vascular disease issues, but an update on evaluation and management recommendations including acute aortic disease, PAD, venous disease, and acute stroke. Additional topics of interest include vascular malformation, vasculitis, and stem cell therapy.

Through didactic and interactive sessions, this symposium will highlight the multidisciplinary approach to vascular disease including vascular surgery, vascular medicine, interventional radiology, cardiology, and other specialists at Mayo Clinic. This symposium is expected to attract North American and international vascular disease specialists in addition to advanced practice, nurse, sonographer, allied health, and other healthcare professionals with an interest in vascular disease. Abstract poster presentations and workshops will be of interest to various vascular specialists and trainees.

SPECIAL SESSIONS – NEW

- One half-day session will be dedicated to Advanced Practice Providers to highlight critical examination skills, tests, and procedures for outpatient and hospital settings.
- Another full-day session is focused for the vascular sonographer, radiologist, and vascular specialist on complex vascular ultrasound imaging techniques and procedures.
- Hands-on sessions will provide opportunities for the vascular specialist interested in achieving certification on certain endovascular procedures and interventions.
